

# Number Ratio and Proportion - Foundation

<p><b>Estimate</b> Round each value to one significant figure</p>	<p><b>Simplifying Ratio</b> Divide both sides by the highest common factor</p> 	<p><b>Percentages</b></p> <p><b>Finding percentages of an amount</b></p> <p>1% ÷100 5% ÷20 20% ÷5 25% ÷4 50% ÷2</p>
<p><b>Standard form</b> <math>a \times 10^n</math>, where <math>1 \leq a &lt; 10</math></p>	<p><b>Simplifying Ratio 1:n</b> Divide both sides by the highest factor of the left hand side</p> <p>2m: 180cm 200cm: 180cm 2:1.8 1: 0.9</p>	<p><b>Multipliers:</b> To find the multiplier for a percentage, divide by 100</p> <p>Use multipliers on a calculator paper e.g. 35% of 370 = 0.35 x 370</p>
<p><b>Sequences</b></p> <p>Fibonacci sequence: 1, 1, 2, 3, 5, 8, 13, 21</p> <p>Geometric Sequence: each term is multiplied by the same constant to get the next number. E.g. 3, 12, 48, 191, .... (x by 4 each time)</p>	<p><b>Fractions</b></p> <p><b>Add and Subtract</b> – ensure the fractions have the same denominator before adding numerators</p> $\frac{4}{5} - \frac{1}{3} = \frac{4}{15} - \frac{5}{15} = \frac{4}{15}$ <p><b>Multiply</b> – multiply numerators and denominators</p> $\frac{4}{5} \times \frac{1}{3} = \frac{4}{15}$ <p><b>Divide</b> – take reciprocal of the second fraction and then multiply the new numerators and denominators</p> $\frac{4}{5} \div \frac{1}{3} = \frac{4}{5} \times \frac{3}{1} = \frac{12}{5} = 2 \frac{2}{5}$	<p><b>Increasing and decreasing a given amount</b></p> <p>Calculator: <math>Original Amount \times multiplier = new amount</math></p> <p>Non-calculator: find the increase or decrease and add to the original amount</p>
<p><b>Squares and Cubes</b></p> <p>Square numbers: 1, 4, 9, 16, 25, 36, 49, 64, 81, 100, 121, 144, 169, 196, 225 etc</p> <p>Cube numbers: 1, 8, 27, 64, 125, 216, 343, 512, etc</p> <p><b>Sharing in a given Ratio</b></p> <p>A Add the ratio parts D Divide the amount by the total parts A and M Multiply the ratio by the value of one part</p> <p>e.g. share £420 in the ratio 2:5</p> $2 + 5 = 7$ $420 \div 7 = £60$ <p>2:5 (x60) (x60) £120 : £300</p>	<p><b>Finding percentage increase or decrease (profit/loss)</b></p> $\frac{value\ of\ increase/decrease}{Original} \times 100$ <p><b>Writing an amount as a percentage of the original</b></p> $\frac{Amount}{Original} \times 100$ <p><b>Reverse Percentage</b> – finding the original amount</p> $Original\ Amount = \frac{New\ Amount}{multiplier}$	<p><b>Finding percentage increase or decrease (profit/loss)</b></p> $\frac{value\ of\ increase/decrease}{Original} \times 100$ <p><b>Writing an amount as a percentage of the original</b></p> $\frac{Amount}{Original} \times 100$ <p><b>Reverse Percentage</b> – finding the original amount</p> $Original\ Amount = \frac{New\ Amount}{multiplier}$

<p><b>Growth &amp; Decay / Compound interest</b></p> <p><math>original\ amount \times multiplier^{time}</math></p> <p>Where the multiplier is the percentage, increase or decrease from 100%, converted to a decimal.</p> <p>e.g.  30% decrease is <math>70\% = 0.7</math>  30% increase is <math>130\% = 1.3</math></p>	<p><b>Dividing by decimals:</b></p> <ol style="list-style-type: none"> <li>Write the calculation as a fraction</li> <li>Form an equivalent fraction to makes integers (multiply by powers of 10)</li> <li>Use short division (bus stop) to calculate</li> </ol> <p>e.g. <math>460 \div 0.4 = \frac{460}{0.4} = \frac{4600}{4} = 1150</math></p>	<p><b>Conversions</b></p> <p>10 millimetres = 1 centimetre    15 minutes = 0.25 hours</p> <p>100 centimetres = 1 metre    30 minutes = 0.5 hours</p> <p>1000 metres = 1 kilometre    45 minutes = 0.75 hours</p> <p>1000cm<sup>3</sup> = 1 litre    1000g = 1 kilogram</p> <p>1000ml = 1 litre    1000kg = 1 tonne</p>
<p><b>Compound Units (rearrange as necessary)</b></p> $Speed = \frac{Distance}{Time}$ $Area = \frac{Force}{Pressure}$ $Density = \frac{Mass}{Volume}$	<p><b>Error Intervals</b></p> <p>least possible value <math>\leq x &lt;</math> greatest possible value</p> <p>e.g. A fence is 30 m long to the nearest 10 m.  <math>25 \leq l &lt; 35</math> m</p> <p><b>Truncation</b></p> <p>Truncation is a method of approximating a decimal number by dropping all decimal places past a certain point without rounding.</p> <p>e.g. Truncate 3.14159265 to 4 decimal places.  = 3.1415</p>	<p><b>Negative numbers</b></p> <p><u>Adding and subtracting:</u> (vertical number lines help)</p> <p><math>-3 - 5 = -8</math>  <math>-3 + 5 = 2</math>  <math>-3 - -5 = -3 + 5 = 2</math>  <math>-3 + 5 = -3 - 5 = -8</math>  <math>-3 + -5 = -3 - 5 = -8</math></p> <p><u>Multiplying and dividing:</u></p> <p>Different signs – answer will be negative  <math>+ \times - = -</math>, <math>- \times + = -</math>  Same signs – answer will be positive  <math>- \times - = +</math></p>
<p><b>Ordering fractions</b></p> <p>Calc: use division to write each fraction as a decimal</p> <p>Non-calc: write fractions with common denominators</p>	<p><b>Order of operations</b></p> <p>Bracket</p> <p>Indices</p> <p>Division and Multiplication</p> <p>Addition and Subtraction</p>	<p><b>Rounding to significant figures</b></p> <p>Start from the first <b>non-zero</b> number and round as normal, but ensure the place value is correct</p> <p>e.g. 345,635 to 2SF = 350,000  0.0060821 to 3SF = 0.0608</p>
<p><b>Index Laws</b></p> $a^n \times a^m = a^{n+m}$ $a^n \div a^m = a^{n-m}$ $(a^n)^m = a^{nm}$ $a^0 = 1$ $a^{-n} = \frac{1}{a^n}$ $\frac{n}{am} = \sqrt[n]{a^n}$	<p><b>Prime Factorisation</b></p>  <p><math>90 = 2 \times 3 \times 3 \times 5</math></p> <p><math>120 = 2 \times 2 \times 2 \times 3 \times 5</math></p>	<p><b>HCF and LCM of 90 and 120 (Factor Tree &amp; Venn Diagram)</b></p> <p>HCF is the product of common factors  LCM is the product of common factors and remaining factors.</p> <p>HCF: <math>2 \times 3 \times 5</math>  LCM: <math>2^3 \times 3^2 \times 5</math></p> 

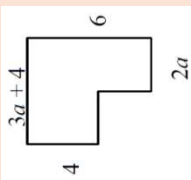

**Notation**  
 $ab = a \times b$   
 $a^2 = a \times a$   
 $(2a)^3 = 2a \times 2a \times 2a$   
 $(a + b)^2 = (a + b)(a + b)$

**Definitions**  
 Expression – no equal signs e.g.  $2x + 3$ ,  $2y$ ,  $(3x - 2)^2$   
 Equations – equal signs, can be solved, e.g.  $y + 4 = 10$   
 Identities – identical/equivalent to e.g.  $2(y + 4) \equiv 2y + 8$   
 Formulae – equal signs, more than one unknown e.g.  $A = \frac{1}{2}bh$

**Simplifying expressions by collecting like terms**  
 Always circle the sign IN FRONT of the term to avoid errors.

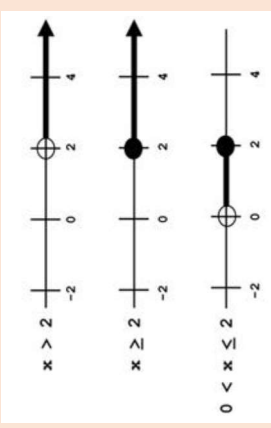

$3x - 7b - x + 9b \equiv 2x + 2b$

Typical Exam Q: Create an expression for the perimeter of the shape by adding and collecting like terms.  
 If the perimeter is given as 20cm, for example, you can create an equation:  
 $4 + 3a + 4 + 6 + 2a = 20$   
 $5a + 14 = 20$

**Simplifying expressions multiplication and division**  
 $2ma^2 \times 7ma = 14m^2a^3$   
 $\frac{18b^6}{3ab^2} = \frac{6b^4}{a}$

**Inequalities**

Open circle:  $</>$   
 Closed circle:  $\leq/\geq$

**Factorising and expanding**

Expand:  $2(y+3) \rightarrow 2y+6$   
 Factor:  $2y+6 \rightarrow 2(y+3)$

Expand:  $(x+4)(x-1) \rightarrow x^2 + 3x - 4$   
 Factor:  $x^2 + 3x - 4 \rightarrow (x+4)(x-1)$

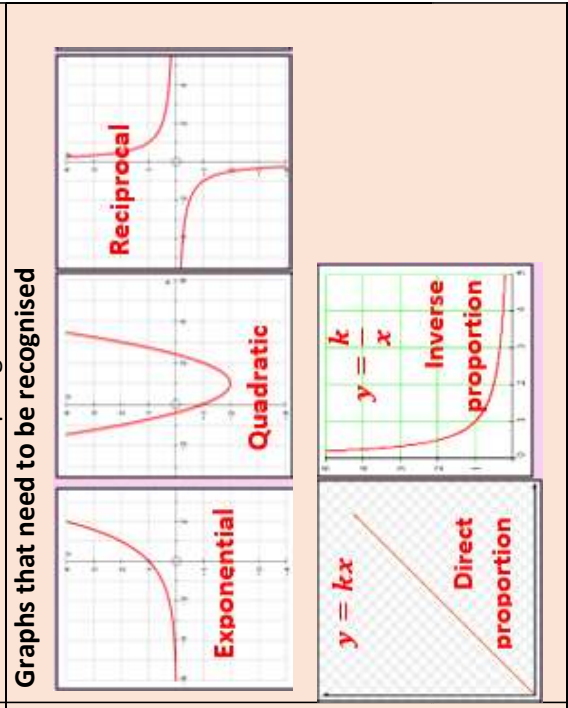

**Straight line graphs**  
 $y = mx + c$   
 $m = \text{gradient}$   
 $c = y - \text{intercept}$

positive gradient / negative gradient

$m = \frac{y_2 - y_1}{x_2 - x_1} = \frac{\text{change in } y}{\text{change in } x}$

Parallel lines – have equal gradients

**Finding the nth term of a linear sequence**

- 5, 7, 9, 11, 13, ...
- Find the common difference: 2
- This is the coefficient of n:  $2n$
- Find the difference between the coefficient of n and the first term  $5 - 2 = 3$
- Add this to the amount of n  
 $2n + 3$

# Geometry and Measures - Foundation

## Trigonometry

$$S \frac{O}{H} C \frac{A}{T} \frac{O}{A}$$

Example – finding a side:

$$\sin 37 = \frac{x}{5}$$

$$x = 5 \times \sin 37^\circ$$

Example – finding a side:

$$\tan y = \frac{3.2}{7.1}$$

$$y = \tan^{-1} \left( \frac{3.2}{7.1} \right)$$

## Exact Trig values

Angle ( $\theta$ )	$\sin(\theta)$	$\cos(\theta)$	$\tan(\theta)$
$0^\circ$	0	1	0
$30^\circ$	$\frac{1}{2}$	$\frac{\sqrt{3}}{2}$	$\frac{1}{\sqrt{3}}$
$45^\circ$	$\frac{1}{\sqrt{2}}$	$\frac{1}{\sqrt{2}}$	1
$60^\circ$	$\frac{\sqrt{3}}{2}$	$\frac{1}{2}$	$\sqrt{3}$
$90^\circ$	1	0	undefined

## Angle Facts

Vertically

opposite angles  
are equal:  $a=b$   
and  $m=n$

Angles in a triangle sum to  $180^\circ$ .

Angles on a straight line sum to  $180^\circ$ .

E.G:  $b=60^\circ$  so  $a = 50^\circ$

## Simple vector notation

$a$ : movement along the x-axis (left or right)  
 $b$ : movement along the y-axis (up or down)

$-a$ : movement left

$-b$ : movement down

Operations with vectors

$$\begin{pmatrix} 2 \\ 6 \end{pmatrix} + \begin{pmatrix} 7 \\ -3 \end{pmatrix} = \begin{pmatrix} 9 \\ 3 \end{pmatrix}$$

If  $b = \begin{pmatrix} 4 \\ -2 \end{pmatrix}$ , then  $3b = \begin{pmatrix} 12 \\ -6 \end{pmatrix}$

## Area of key shapes

Triangle:  $A = \frac{b \times h}{2}$  ( $h$  = perpendicular height)

Parallelogram:  $A = b \times h$  ( $h$  = perpendicular height)

Trapezium:  $A = \left( \frac{a+b}{2} \right) \times h$  (add together the parallel sides, divide the total by 2, and then multiply by the perpendicular height between the parallel sides)

## Angles in parallel lines

Corresponding angles are equal

Alternate angles are equal

Co-interior angles are equal

## Volume & surface area

Volume = area of cross section x length

Surface area = area of all the faces of a 3D shape

Learn the cylinder

$$V = \pi r^2 h$$

$$SA = 2\pi r^2 + \pi dl$$

## Angles in regular polygons

$n$  = number of sides

Interior angle + exterior angle =  $180^\circ$

$$\text{Exterior angle} = \frac{360}{n}$$

$$n = \frac{360}{\text{Exterior angle}}$$

## Types of triangles

Right angled

Isosceles

Equilateral

Scalene

## Types of quadrilaterals

Square

Rectangle

Parallelogram

Rhombus

Trapezium

Kite

### Transformations – rotation

Always use tracing paper.

Describe:

1. It's a rotation
2. Size of rotation in degrees
3. Orientations: clockwise or anticlockwise
4. Centre of rotation given as a coordinate (x,y)

### Transformations – translations and reflections

Translate triangle ABC to A'B'C' with the vector  $\begin{pmatrix} 3 \\ 0 \end{pmatrix}$

Reflection in the line  $x=a$

Reflection in the line  $y=a$

### Transformations - enlargement

Describe:

1. It's an enlargement
2. The scale factor (if the image is smaller than the object the scale factor is fractional e.g.  $\frac{1}{2}$ )

3. The centre of enlargement given as a coordinate

### Congruent triangles

<p>SSS (Side – Side – Side)</p> <p>3 sides are respectively equal</p>	<p>SAS (Side – Angle – Side)</p> <p>2 sides and the included angle are respectively equal</p>
<p>ASA (Angle – Side – Angle)</p> <p>2 angles and the included side are respectively equal</p>	<p>RHS (Right angle – Hypotenuse – Side)</p> <p>Hypotenuse and one side are respectively equal</p>

### Similar shapes

Same shape, different sides

The ratio of the lengths of corresponding sides are equal

Length scale factor =  $15 \div 5 = 3$

$x = 3\text{cm} \times 3$

### Circles

$Area = \pi r^2$

$Circumference = \pi d$

$Sector Area = \frac{\theta}{360} \pi r^2$

$Arc length = \frac{\theta}{360} \pi d$

### Pythagoras' Theorem

$a^2 + b^2 = c^2$

Only applies to right angled triangles.

Can be used to find the height of an isosceles triangle

Can be used to find the length distance between two coordinates

### Bearings

Measure from the North

Measured in a clockwise direction  
Written using 3 digits

Bearing of B from A (start at A)

Bearing of A from B (start at B)

### 3D notation

Cube:

Faces: 6

Edges: 12

Vertices: 8

Square based pyramid:

$F = 5, E = 8, V = 5$

# Probability and Statistics - Foundation

## Averages

Mode: most common piece of data

Mean: Sum of the data ÷ total frequency

Median: order the data and find the middle value

Range: Highest value – lowest value

## Frequency Polygons

- Plot frequency at the mid-point
- Join with straight lines

Weight $w$ (kg)	Frequency
$30 \leq w < 50$	3
$50 \leq w < 55$	7
$55 \leq w < 75$	10
$75 \leq w < 80$	6
$80 \leq w < 100$	4

## Reading and Drawing Pie Charts

Find the fraction of the total

1000 people were surveyed

Beef:  $\frac{150}{360} \times 1000$

Vegetarian:  $\frac{90}{360} \times 1000$

Hair colour	People
Blonde	8
Brown	12
Red	3
Grey	2
Black	6

Find the fraction of the full circle.

Size of Blonde sector:  $\frac{8}{31} \times 360^\circ$

## Averages from a frequency table

Mean:  $\frac{\sum f^w}{\sum f}$ ; where,  $w$  is the midpoint of the group.

Median group: find which group the  $\frac{n+1}{2}$ th value lies. Where,  $n$  is the total frequency.

E.G. in this table 51.5<sup>th</sup> value which lies in group  $8 < w \leq 12$  (using the cumulative frequency

Weight of box ( $w$ kg)	Frequency
$0 < w \leq 4$	11
$4 < w \leq 8$	16
$8 < w \leq 12$	29
$12 < w \leq 16$	26
$16 < w \leq 20$	20

## Venn Diagrams

Information given:  
90 pupils were surveyed  
52 said they owned a laptop.  
45 said they owned a tablet.  
23 said they owned both.

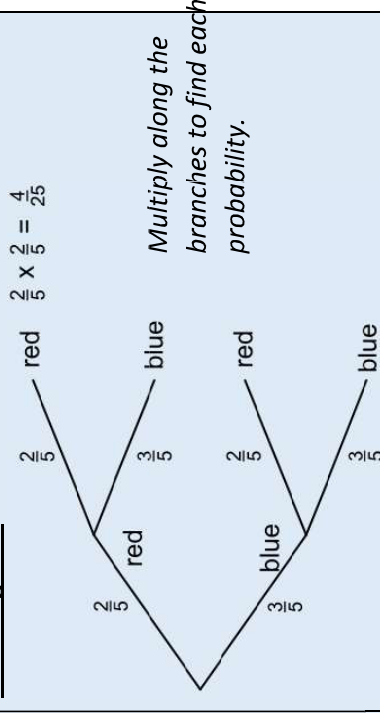

## Probability Definitions

Total probability: adds to 1

Relative frequency:  $\text{frequency} \div \text{total trials}$

Independent events: one event doesn't impact the other

## Tree diagrams

1. Probability that a red counter is picked both times  $P(RR) = \frac{2}{5} \times \frac{2}{5} = \frac{4}{25}$

2. Probability that the counters are different colours =  $P(RB) + P(BR) = \frac{2}{5} \times \frac{3}{5} + \frac{3}{5} \times \frac{2}{5} = \frac{12}{25}$

## Expected outcomes

Expected outcome = probability x number of trials

E.g. A biased spinner is spun 800 times. The probabilities it lands on each colour is below. The probability of it landing on red is the same as the probability of it landing on green. How many times would you expect yellow to come up.

Result	Red	Green	Brown	Yellow
Probability		0.48	0.2	

$P(Y) = (1 - 0.48 - 0.2) \div 2 = 0.32 \div 2 = 0.16$

Expected yellow =  $0.16 \times 800 = 128$
